This studio will be taking on the design of an education and retreat center for Oregon State University’s College of Forestry in their McDonald-Dunn Forest. The project will also be a forest products wood demonstration building and we will be exploring the potential of new engineered wood products in the designs.

Along with OSU’s College of Forestry, we will be working with a team of civil engineering students (largely virtually), led by Professor Mikhail Gershfeld, from the Department of Civil Engineering at California State Polytechnic University, Pomona.
