Making Time
Evoking the Past, Present and Future in Built Environments

Recollecting the past, interacting with the present, and anticipating the future are essential aspects of human existence. This course explores how these temporal modes of human being can be better supported by the built environments where we spend most of our lives.

In addition to learning how existing spaces evoke time, you will also have the opportunity to apply the design principles introduced to a project of your own choosing.

Arch 407/507, Thursdays, 4–5.50 pm, 252 Straub Hall
2/3 Credits, Kevin Nute, knute@uoregon.edu
