Time in Architectural Space

Designing the Past, Present and Future into Built Form

Arch 407/507 Spring 2010
Thursdays, 4-6 pm, Room TBA

Recollecting the past, sensing the present, and anticipating the future are essential parts of human being. This course will examine how these three temporal dimensions can be most effectively integrated into built environments.

In addition to analyzing existing buildings, you will also have the opportunity to explore one of these temporal domains in the context of a current or previous design studio project.
