Time in Architectural Space

Designing the Past, Present and Future into Built Forms

Arch 407/507, Winter 2009
Thursdays, 4-6 pm, Room TBA

Recollecting the past, sensing the present and anticipating the future are fundamental to human well-being. Among other things, they help us to orient, stay alert, affirm our identity, and shape events.

This course will examine how these three temporal dimensions can effectively be integrated into the built environment.

In addition to analyzing built examples, you will also have the opportunity to explore each temporal dimension in its own design assignment.
